The conformation of molybdenum carbide (Mo₂C) and its dissociation behavior in high pressure: an X-ray single crystal structure study. The X-ray crystal structures of Mo₂C have been studied as a function of pressure up to 100 GPa using diamond anvil cells and synchrotron radiation diffraction techniques. We show that the molybdenum atoms in Mo₂C remain ordered at pressures up to 50 GPa but become disordered at higher pressures. A structural transformation from a rhombohedral to a body-centered tetragonal phase occurs at a pressure of about 54 GPa, which leads to the formation of a stable three-dimensional network structure of Mo₂C. The three-dimensional network of Mo₂C is further compressed to a two-dimensional sheet-like structure at higher pressures and the stable structural form is retained up to 100 GPa.

Q: If n is odd, $\cos(2\pi nx)$ has n real roots. How do I show that if n is odd, $\cos(2\pi nx)$ has n real roots? A: We have $\cos(2\pi nx) = \frac{\sin((2\pi n+1)x) - \sin((2\pi n-1)x)}{2}$. If n is odd, then $n+1$ is even and $n-1$ is odd. This implies that $\sin((2\pi n+1)x) = \sin((2\pi(n+1))x)$ and $\sin((2\pi n-1)x) = \sin((2\pi(n-1))x)$ and the given function is just a function of $\sin(2\pi x)$. Since $\sin(2\pi x)$ has 2 roots, the given function has 2 real roots. A: If we define $f(x) = \cos(2\pi x)$ then $f(x+1/2) = \cos(2\pi(x+1/2)) = \cos(2\pi(x+1/2)+2\pi) = \cos(2\pi x) = f(x)$ and $f(-x)$

It has a series of inputs on it, one being the email address. The idea is that the user has entered their email, hits 'submit' and gets an email sent to them. I'm aware of a fix that

works in all other browsers (to prevent an email going to the spam filter) but only in IE 11. (Basically, whenever you have a regular space in the name of an element that's inside a form, IE11 will only validate the first part of that name, meaning you can send an email address to spammail.spam.com if you have a space in the email address. I know how to fix this, but my problem is how to get IE 11 to validate it.) The validation of the email field looks like this in all browsers: So the name of the input is 'email' (with a space in it). It works correctly in all browsers except for IE 11. If I change the name to 'email_address' then it works in all browsers except IE 11 (and Opera, 2d92ce491b
