Some of the Hiren's Boot CD versions don't support some windows.. A: The "programmes/images" are the images you need to load the OS on the HD. The.ISOs are the images for the OS, it's up to the developer to create them. The Hiren's Boot CD has the capacity of a Windows 10 ISO, that's why it has Windows 10, it also can have other Windows versions like Windows 7, 8, 8.1, but not Windows XP. After you burn your ISO with the Hiren's Boot CD (or any other burning software), then you boot from it and select to "Install", in that point you can choose the HD with the OS on it. Hope it helps you. New-generation intermittent-pulse magnetic field exposure-based treatments for depression: application of excitatory-inhibitory neuronal-firing theories. Among stress-related mental illnesses, depressive disorders are highly prevalent and carry a huge burden of global morbidity and mortality. This highlights the importance of effective treatments for depression. Magnetic fields (MF) have long been used in medical settings for treatment of a wide variety of conditions. Recent studies also suggest that specific MF patterns can elicit neurobiological changes in the human brain that are relevant to emotional processing and that can change over time. In this review, we examine whether the MFs generated by state-of-the-art pulsed MF generators, such as Magnetic Electro-Cell-Therapy (MECT), are effective in improving mood in patients with major depressive disorder (MDD). Based on excitatory-inhibitory neuronal-firing theory, we also propose a novel 'NeuroMagnetic Field' (NMF) pattern that has a stronger time-dependent excitatory effect on the brain and a stronger inhibitory effect on the activity of brain regions involved in emotional processing. Compared with the 'Conventional' MF pattern (cMF) commonly used in MECT, NMF exerts a more rapid and longer-lasting therapeutic effect
