A: I think you got malware. In case of vista, you can try to use A: This is a bundle of Trojan horse programs. The infected computer is in fact a botnet. Remove the virus and stop the infected processes to stop the virus from spreading. This kind of malware is designed to go through a network and spread itself around the internet to other compromised computers. It is a command and control network where you get directed to a site. If you are seeing this on a link from another site, you have probably been infected by it. The sites they go to are usually gambling, adult, or dating sites
