Add to cart. SKU: 9780050792468-SOLUTIONS Categories: CRC, . In this manual you will find the solutions to the problems which are dealt with in the following chapters. Each problem has been designed to make sure that the exercises provided are sufficiently challenging to give you a good understanding of the problems covered. It is therefore advisable that you read the relevant chapters in this manual before you do the exercises to get a clearer idea of what to expect. For each problem you are given: - a short description of the problem, - an outline of the solution, - a thorough description of the solution, - a clear explanation of any special techniques used in the solution, - a partial solution, to show you how to reach the final answer. The solutions provided are tailored to the level of difficulty of the problems. If you find that your solution is incorrect, then read the description given of the question and decide whether or not you have misunderstood something. Remember that you should try to find the answer for every exercise before you refer back to the solutions manual. After reading the solutions, check whether or not you have understood the question. If you do not understand how to get the answer, read the description of the question again. Remember, you can only get to the answer by studying the question carefully and applying your reasoning skills. Remember that you should complete every exercise in the book before you move to the next one. Try to work out your answers in the correct order, because the solutions to the problems in this book are in the order which the exercises are done in. A list of reference and abbreviations is given at the end of each chapter. The reference list is a list of books you can buy which might help you solve other exercises in this book, while the abbreviations are a guide to the abbreviations used in the text. 2d92ce491b
