Nov 25, 2019 Category:Computer-aided design software Category:Computer-aided design software for WindowsQ: About the existence of totally discontinuous real valued function Q: Does there exist a function $f:\mathbb R\to\mathbb R$ such that $\;\;:f^{ -1}(0) eq\mathbb R$? The answer is negative but I'm not able to provide a rigorous explanation. I know that there are functions with finitely many discontinuities. (For example, $f(x)=|x|-2\,\mathbb {sign}(x)$ is a function with only two discontinuities). If the target function has finitely many discontinuities, then it must be continuous (even surjective). It is very easy to give a counter example to the existence of a function with infinitely many discontinuities. (For example, $f(x)=x^2$ is such a function) The explanation I have in mind is: Let (x_n) be a sequence of the reals such that $x_n\to x$ and $f(x_n)\to y$ as $n\to\infty$. If $f^{ -1}(y)=\mathbb R$, then $x=f(y)\in f^{ -1}(y)$, contradiction. A: No. Say f is a function such that $f^{ -1}(0) = \mathbb R$. Then since there is an element of $f^{ -1}(0)$ that is irrational, there exists an interval I such that $0 otin f(I)$. So, choose $x_0 \in I$. Then, since f is surjective, there exists $y_0 \in f(I)$. But since $f(I) \subseteq \mathbb R \setminus \{0\}$, we have ly_0l eq

The purpose of this wiki is to explain the features and state of delcam available at the time of the wiki being compiled. Most delcam versions will have multiple images available as there are many options.
