korg pa50 operating system rapidshare Posted:16 Mar 2010, 10:31 Easy. When you type commands, the command separator is a space. For example: If I am in my directory "home" and type ls, it will list the files in the directory. If I then type ls -, it will list all the files, the files in the directory, and files of subdirectories. What is the difference between the two? 1) ls 2) ls -l 3) ls -l | grep ".la" You said there were three lines of output. That would make the line in bold face, ".la elm.txt". But it says no file found, so that should be "No file or directory found" (is that the same thing?) Posted:16 Mar 2010, 10:32 Yes, that is right. When you run a command, you will get a list of items. You can easily find out what you need to run by looking in the menu and opening the help window. When I type in ls -l | grep ".la", I will get a list of all the files that end with la. Hope that helps Posted:16 Mar 2010, 10:33 3) ls -
