AutoCAD started as a product of Bolt Beranek and Newman (BBN), a company that played an instrumental role in the development of the ARPANET, the precursor to the modern Internet. The founder of BBN, Dr. Jack Massey, created the original design and programming language for the ARPANET known as MUDD. MUDD was based on the Smalltalk programming language and was created

in 1970. It was through MUDD that BBN created the development system known as ADAMS for creating video games on the ARPANET. In the late 1970s, MUDD was expanded by one of its inventors, Dr. Daniel Weinreb, to create a new programming language known as MUDD-II. Dr. Weinreb created MUDD-II because he wanted to add object-oriented functionality to MUDD. In the early 1980s, Dr. Weinreb worked on a project with Don Woods, an IBM executive, to create a new product that he described as a "next generation CAD application."

The result was a powerful and high-level programming language known as AutoLISP, which was originally intended for developing very large-scale applications. AutoLISP was originally developed on the APL and Symbolics computers and was intended to replace FORTRAN in large-scale design applications. Although the first version of AutoLISP was released in 1981, it was not a commercial product. In 1982, Dr. Weinreb left BBN to found a new company, Computer Dimensions, Inc. (CDI). In August of 1982, CDI released AutoCAD as a commercial software product. The timing was fortuitous. CAD applications were becoming available for desktop computers, a market that had previously

been the domain of mainframe computers. AutoCAD was the first and only CAD application for the desktop computer at the time. In the

"Our Parks crews are still working hard throughout the state to get everything

ready for the many campers that are going to use their state parks during the summer," said Brian Roecklein, CSP Interim Director. "Many campgrounds are still under construction, particularly in the Central Valley and foothills. To date, there are only about 2,400 miles of roads that have been improved in parks. There are also another 2,200 miles that need a light-duty construction contractor to bring it to a more acceptable standard. All of this needs to be accomplished in the next two years to ensure that the millions of travelers that we are expecting this year will have a safe, comfortable and enjoyable camping experience." California state park roads, some of which are old and neglected, provide the primary connection between campgrounds and the trails and highways. They also carry the brunt of the wear and tear, especially the unpaved roads, from the heavy use of recreation vehicles and buses. During the summer season, state parks roads are used heavily by campers, travelers and visitors to local events. State park roads and campgrounds are designed to accommodate the wide range of recreational vehicles and buses that visit these parks. Campers choose campgrounds that are close to campgrounds, state park roads, the nearest town, etc. Campgrounds 5b5f913d15
