Dm Address Book Crack + Free For PC [2022]

Dm Address Book Free Download is a tool you can use to keep an address book with multiple contacts stored on your computer for safekeeping. It's wrapped in a highly intuitive interface and contains approachable options for inexperienced users, including a search function. No installation required The program's packed in an executable file that can be saved in a custom directory on the disk or a USB flash drive, in order to directly launch the tool on any computer without any prerequisites. It doesn't make changes to the Windows registry. However, it stores configuration settings in an XML file auto-created in the same location as the.exe (the contacts are stored in xCard format). Populate the address book with contacts The main application window invites you to add new contacts to the address book by specifying the person's name, home information (landline and phone number, address, city, province, country, zip code, email address, website), and work-related details (company, title, phone number, extension, fax, address, city, province, country, zip code, email address, website). It's necessary to fill in at least the name to save the contact. You can create as many contacts as you want, edit properties later, delete entries, undo actions, as well as search for contacts by name. There are no other notable options available here. Just remember to save settings on exit, because you're not prompted for this action. Evaluation and observations Unsurprisingly, it consumed low system resources and didn't hang, crash or show errors throughout our evaluation. On the other hand, Dm Address Book Free Download comes loaded with a rudimentary set of features. For instance, it doesn't give you the possibility to filter contacts or to create customized profiles. ** no installation required ** 1- Create a folder that can be shared on different hard drives. 2- Save the Dm Address Book For Windows 10 Crack.exe in this folder. 3- From any Windows computer, double-click on the DM Address Book.exe file 4- It will open the address book application 5- Press the X button on the address book application to share the folder 8- Open Google Contacts and drag and drop you from your computer.
