Audiobus Framework is an open-source framework that plugs together applications that work together to create music creation and synchronization apps.

Audiobus is made up of components called "Switches" that connect apps together. For example, a "Channel Mixer Switch" plugs together stereo recording apps. A "Mixer Switch" plugs together mixers, apps that control parameters for a mixer. Audiobus also has some pretty awesome built-in components. For example, you can connect the AudioUnit apps, which control

parameters for a "virtual audio plugin". The "Spatializer Switch" plugs together audio processing apps that deal with spatialization. You can control the way Audiobus works by using the settings in the Audiobus preferences. This is a live project so far. We only release the master version. Features: - Fix: Error sending MIDI messages - see release notes. - Fix: Undo doesn't work with Scratch audio recording.

- Fix: Delete and a long list of other crashes and memory leaks. - Fix: Don't crash/crash on startup on OSX 10.9.1. - Fix: Unplug the iPad or iPod no longer fixes the "ring" audio bug on the iPhone. - Fix: AudioIO crashes when pressed then released. - Fix: AudioFileStreamCopyProperty

Portable Audio Tagging Tools Reviews: Dont't care at all 5 By DenzinB Bought it, say there is lots of function, good, but need more function, nothing could the program, sorry! Functions 5 By sjinkym Great tool and it has been running 24/7 for me. Functions so far are good, I just wish the output could be more specific to my needs

as an IT professional. Keep up the good work. Great app 5 By frankest I can easily filter through all my music and make playlists with the great functions. Some kind of script for output with ability to change the output format would be great. I love it to Tunes. One could wish it has more options 5 By Gremia It's a great app, but one could wish it has more options. One of my fav. apps 5 By EGODD
