This may be the case for some developers who are accustomed to using Delphi with ObjectARX. However, Delphi with ObjectARX

---

does not have some of the essential features that are found in Delphi XE5, including support for Unicode and some enhanced features of the VCL and DataSnap. Delphi XE5 | How to Enable Unicode? With the traditional Standard Pascal Dialect, you can compile a project that uses Unicode and support for Unicode is built-in. If you are working with legacy code and you want to keep that code compatible with Unicode, you need to change the project settings to use the Unicode Standard Pascal Dialect (SPD). To set the properties that you can use to change the options for your project, follow these steps: Make sure that you set the Delphi\_DIR property to

---

point to the correct location where the Delphi installation is installed. You need to set the Delphi\_DIR property for each project. To set the Delphi\_DIR property for a particular project, right-click the project in the project navigator, and then select Properties. Set the following properties: Delphi\_DIR property For each project that you want to compile with Unicode, set the Delphi\_DIR property to point to the location where the Delphi installation is installed. For example, if you installed Delphi on the C:\ drive, set the Delphi\_DIR property to C:\Delphi. To set the Delphi\_DIR property for a particular project, right-click the

---

project in the project navigator, and then select Properties. Project settings | General tab | Delphi\_DIR property Set the Delphi\_DIR property to the location where the Delphi installation is installed. For example, if you installed Delphi on the C:\ drive, set the Delphi\_DIR property to C:\Delphi. To set the Delphi\_DIR property for a particular project, right-click the project in the project navigator, and then select Properties. If you want to compile a project that uses Unicode, set the Delphi\_DIR property to C:\Delphi. MarraLAB for Visual Studio is a useful component that was especially tailored to integrate seamlessly with the integrated development environment. The main purpose of MarraLAB for Visual Studio is to increase the productivity for application developers and help them carry out more easily the repetitive tasks through automation. MarraLAB for Visual Studio Features: MarraLAB for Visual Studio integrates MarraLAB for Visual Studio into Visual Studio and MarraLAB for Visual Studio integrates the software for.NET into Visual

---

Studio. This way of doing things allows the MarraLAB for Visual Studio to be accessed from the.NET menu, allowing the user to save time and the use of resources as the application can be accessed from Visual Studio without having to open the MarraLAB for Visual Studio and run the application outside of Visual Studio. MarraLAB for Visual Studio is designed to be totally interactive, with the users being able to both create and edit application objects and components with Visual Studio. All settings of the MarraLAB for Visual Studio can be accessed from Visual Studio. MarraLAB for Visual Studio can be used either in the development

---

environment, through its integrated menus, or both at the same time. MarraLAB for Visual Studio is compatible with all languages supported by Visual Studio. MarraLAB for Visual Studio is also compatible with other development tools such as Sandcastle or NopCommerce.NET. MarraLAB for Visual Studio supports all the development languages in Visual Studio such as C#, C++, VB.NET, ASP, ASP.NET, MSIL, Embedded, Java, and so forth. MarraLAB for Visual Studio has a simple interface, making it easy to use even for beginners. MarraLAB for Visual Studio is divided into two sections: Design view. This view is designed

---

to allow the user to work with object templates, components, and views. Code view. This view is designed to allow the user to edit applications and objects, such as custom components, user controls, and components. MarraLAB for Visual Studio has the following support options: Options from the integrated settings panel that can be accessed through the Tools menu. Options from the MarraLAB for Visual Studio integrated settings panel that can be accessed from within Visual Studio through the Options menu, the advanced tab, and the Debugging menu. Migrating an application from a previous version. Importing a project from
