Watch My Domains Pro Crack+

Watch My Domains Pro is a handy tool for the users who own multiple domains and need to track their registrars or expiration dates. This tool is designed to quickly retrieve the desired information and to display it in the main window. You can create multiple projects and add the desired domains to the list in order to perform periodical checks. The results can be printed or exported to CSV files in order to use them with other applications. The most significant and useful features of this product are the possibility to create multiple projects (i.e. multiple data lists), to keep them for future needs and to generate lists of projects according to the user preference. All data lists can be sorted and filtered in order to easily get the information needed. The web interface of this tool is simple, but all the features can be easily accessed using the registry. In this way, the user can create and delete items, add and remove items to the data lists, modify items and data lists properties, print reports and export data to files and spreadsheets. This is a free version of Watch My Domains Pro, not all the features are available in the free version. Watch My Domains Pro key features Shareware | Last Update : 06/27/2015 | 132 Mb 5/5 Quick Info Watch My Domains Pro is a handy tool for the users who own multiple domains and need to track their registrars or expiration dates. This tool is designed to quickly retrieve the desired information and to display it in the main window. You can create multiple projects and add the desired domains to the list in order to perform periodical checks. Watch My Domains Pro Description: Watch My Domains Pro is a handy tool for the users who own multiple domains and need to track their registrars or expiration dates. This tool is designed to quickly retrieve the desired information and to display it in the main window. You can create multiple projects and add the desired domains to the list in order to perform periodical checks. The results can be printed or exported to CSV files in order to use them with other applications. The most significant and useful features of this product are the possibility to create multiple projects (i.e. multiple data lists), to keep them for future needs and to generate lists of projects according to the user preference. All data lists

Watch My Domains Pro Crack + Incl Product Key (Final 2022)

Projects: Use the Projects tab to create a list of domains to track. To add a new project, click on the pencil icon and fill the information as requested. An automatic search will be performed in order to match the desired data. You can then use this list to perform the desired checks. **Project Type:** Select a check type from the drop-down list, choose from the following values: APOCALYPSE DELETE EXPIRATION LINKED REFERRER SERVFAIL TRACKER **Verify IP:** This check type allows you to verify the IP address of a domain (available only in the PRO version). **Date:** This check type allows you to track the expiration date of a domain (available only in the PRO version). **Operating System:** Choose the operating system that will be used to check the IP address (available only in the PRO version). **Speed:** This check type allows you to track the speed of the website (available only in the PRO version). **Name Servers:** Choose the name servers that you want to use in order to track a domain. The order matters, as the first one is used to determine the value. **Manage Checked Domains:** If you have several projects, you can manage them using this list. You can select the desired project and click on the pencil icon. **Search:** This check type allows you to search for domains using a specific key. The tool will only search for the domain name and it will not try to complete the string entered by the user. For example: you can search for the name of the website of a specific company. **Filter Results:** You can apply additional conditions to the searched domains using the checkboxes available below the search box. **Export to CSV:** Use the Export tab to create an automated export of the project. There are different options to save the exported

data. When you export the data to a CSV file, the data is automatically inserted in the first line of the CSV file. Save Results to a Report: Use the Print tab to create an automated print of the project. The result will be saved in the selected PDF or PDF/A format. The printed result will be inserted in the first page 77a5ca646e
