With Markup Import and Markup Assist, you can also improve the look of your CAD drawings by automatically checking the work against design standards. You can even merge the same layer together for a "multi-view" experience. Now, you can edit, and see the results of your edits in real time on the drawing itself, without the need to export it first. As designers, architects, and engineers, we often make changes to drawings as we go. We may make changes to a single section of a drawing, then update the entire drawing with a single click. As you're making your edits, you may realize you've made a mistake or changed your mind. In fact, you

may want to go back to an earlier version to incorporate those changes. With Markup Import and Markup Assist, you can check the work as you go. The new Markup import and Markup assist features give you all the same capabilities you've come to expect from our On-Screen Markup tools in AutoCAD 2019 and older. But, with real-time, interactive editing, you can make adjustments on the drawing itself, in addition to the exported file. Immediately show any drawing properties and annotations, the full list of Undo history items, and a live view of the drawing. Real-time interactive editing: Just draw to see the results of your changes The new Markup import and Markup assist features let you change a drawing's appearance on-screen, with almost no setup required. In many cases, you can simply start drawing to see the result of your edits. Not only that, but you can use these new tools to check the work as you go. When you make changes
