Britain's budget deficit would be larger after Brexit, and also soar as a result of the uncertainty for the departure, according to a report. The National Institute of Economic and Social Research (NIESR) said it foresaw both a larger budget gap and a bigger hit to growth, adding that it expected the effects of the uncertainty in the market and the effect on confidence to be felt for at least a year. "Brexit is widely judged to be associated with instability and uncertainty, and this is not surprising. Once the details of the future relationship with the EU are agreed and are not contingent on the UK remaining in the EU, then there is likely to be less uncertainty and more positive certainty," said Robert Joyce, NIESR economics director. Since July, the British stock market has fallen by about 15 per cent, as the UK prepares for a big vote in the end of March. Market observers have had to recalibrate their
