It can read EPS and PSD files, supports PDF, CSV and TIFF formats, and can import most other file formats, which means you should have no problem sharing your work with other people. You can use Adobe's online tools to convert between formats. Image formats You can download these files from Adobe or use another online converter. EPS Probably the most commonly used format, with a large number of applications. With one of these you should be able to export images in this format to almost every device that runs Windows (eg. the new iPad). PDF Images can be inserted into a PDF document and made interactive, in the form of a form that you can print and fill out. You can also insert hyperlinks within them. CSV Chunked text, similar to CSV (comma-separated value) files. TIFF A high-quality, lossless, raster format that stores each pixel separately. TIFF files are used by graphics programs such as Photoshop and GIMP. PNG This is the default format for vector graphics. PNG is a lossless format, which means that it won't lose quality when you compress or delete individual pixels. This means that it is always smaller than jpegs and gifs. JPEG A lossy format that is the most common kind of format for creating digital images. GIF An excellent format for text and graphs. It is commonly used to animate GIFs. However, GIFs are only a lossy format, which means that there will be some loss of quality as you compress the image. For this reason you should avoid using GIFs for high-resolution images. Video formats You can also create videos with Photoshop, which you can export in other formats. The road to the Parthenon Sunday is a great day to go to Athens to see the Parthenon in all its glory! In fact, it is the only Sunday that you can visit it. The path to the structure is "crowd-free" and the view is awesome. If you don't already know, there is one side of the building that is perfect for photographing during the day. On the other side, which is visited during the night, people install a light show which has stunning visuals. I recommend that you go during the night if you get to visit and enjoy the view! On that note, here are some interesting facts about the building: The Parthenon is the most well preserved ancient Greek structure in existence and was built to a certain standard of perfection. It was first built in 447BC and was completed in 432BC. Before that, a smaller version of the building was built. The Greek original was slightly different from the one you see today. It was a bit larger, had a much smoother surface and even had a small ornamental koumbos. The original design is still visible on the ceiling of the Acropolis Museum. The Parthenon was the centrepiece of the Acropolis and the most important structure within the Acropolis. The Parthenon was decorated with many beautiful marble sculptures that have been removed and moved to the Acropolis Museum. The 5 main columns are known as the Pentelic. These can still be seen on the inside of the Acropolis Museum. There are also many engraved stones and large wings on the west walls. There are also many statues on the west wall and a few on the east wall. During the excavation process in the 2nd century BC, the ancient Greeks discovered numerous statues and valuable objects on the site. The Parthenon was one of the most important religious and political structures. It was made to serve as a place for the central religious and political authority on the Acropolis. The Greeks called it the temple to Athena Parthenos, which in greek means "Athena, the virgin goddess". The Parthenon was also a model for many other structures on the Acropolis, most notably the Propylaia, the south entrance. Back at the parthenon, make sure to visit the museum. It is worth it! A really interesting fact about the museum
